

## Altman's Trucking LLC | 2022 Case Study

Altman's Trucking LLC strives to have one of the safest and most reliable trucking companies. Johnny Altman, the owner, is always searching for better ways to protect his company and employees.

## The Problem

In the trucking industry, you are responsible for the protection of other companies' goods as well as the safety of your own employees. Because of this, it is important to have a solid solution put in place that adds an extra layer of safety and protection.

Altman's Trucking LLC recently came face to face with a problem. They were victims of fraudulent injury claims against their trucks and drivers. These false claims submitted by attorneys resulted in an increase in insurance premiums throughout the industry. Any increase can be dangerous for a business in the trucking industry, so Altman's Trucking LLC needed to find a way to stop these false claims from happening.

Even though Altman's had a system in place that was supposed to help stifle these claims, it didn't give them enough protection in vital situations. That's when they decided to begin the search for a camera system that would meet all their needs and bring full protection to the company.

## Search for A Solution

A big issue for Altman's Trucking LLC was the lack of angles that their current camera system gave them. They needed a system that would not only give them every important angle but a system that allowed easy and quick access to those angles as well.

After a series of tests of various systems, Altman knew they wouldn't be sufficient to handle his problem, as the systems either lacked enough cameras, or the clarity of these cameras was subpar.

**Example of A Fraudulent Claim**

## About the Solution

Johnny Altman decided to go with Vestige's camera system because they brought with them full 360-degree views with clear visibility. With Vestige's system, Altman was able to have angles in the front, down the driver side, down the passenger side, and behind the trailer with Vestige's trailer camera.

The fact that Altman can now protect his drivers from fraudulent claims is a massive relief. He can now prove, from any angle, what really happened in an incident. It has been industry-changing according to Altman.

## Results and Benefits

A big piece of the Vestige solution is the ease of access when it comes to the footage the cameras record. Altman noted that a massive benefit from the new system is the quickness with which he can simply go to a computer, check the footage, and send it to prove his drivers' innocence. Not only will this system help defend any active false claims, but it will serve as a warning for anyone looking to make a false claim.

Before Altman had Vestige's system, these false claims relied on the driver's word against another person's. Now, Altman can physically prove the companies innocence against these bogus claims. In fact, Altman said that he has already proved his drivers' innocence on multiple occasions against these fraudsters.

A small, but nonetheless nice addition to Vestige's robust system is that Altman now has more peace of mind when it comes to trusting his drivers. He knows if they are speeding, and can take time to better train employees if he notices any inconsistencies in the footage.

The implementation of the Vestige system has led to an increase in industry-wide satisfaction, as drivers, employers, customers, and insurance agents all enjoy the benefit of the protection the Vestige system brings to them.

The system already saves Altman time and money because he knows exactly what to do when an incident occurs, and he knows the truth will come out instantly.
